

# Using Data to Drive Outcomes: The Key to Personalized Vascular Access Care

Join us for this special clinical education event

## Overview

### Program description

A clinician's quest to advance practice for the betterment of patients can be a challenge when they are not armed with the tools, resources, or funding to fuel change. Data is often seen as an IT project or for publication and not necessarily a means for patient improvement. This presentation looks at how available data within the healthcare setting can become a valuable asset in the pursuit to drive change and deliver personalized care. From identifying an issue and establishing a planned method of collection, this presentation will discuss the factors that drive decision making, and how data can help strengthen a position for effecting change, ultimately resulting in a compassionate approach specific to each patient.

*This activity for **1 contact hour** is provided by BD Medical Clinical Resource Services Department, which is accredited as a provider of continuing education by the California Board of Registered Nursing provider #CEP 13136.*

## Program details

### Presenter

Lori Kaczmarek, MSN, RN, VA-BC™

### Learning objectives

Objectives for this presentation are:

- Identify at least three historical studies which had a major impact on vascular access.
- Name at least three significant vascular access practice changes.
- Compare standardized care versus personalized care.
- Consider disease and co-morbidity impacts on vascular access.
- Identify mechanisms to drive change through data.
- Discuss ways to collect data and consider tools available.
- Consider necessary components of data tool development.

## Register now

### Date:

**July 11, 2019**

### Time:

**6:00pm – 9:00pm**

### Location:

**Boulevard Brewing  
Company**  
2501 Southwest Blvd.  
Kansas City, MO 64108  
816-474-7095
